

M@ilMeter Forensic - Technical Fact Sheet v2.0.2 for Microsoft® Exchange

M@ilMeter Forensic provides managers with an unprecedented insight into their companies email usage, while combining real-time updates with an intuitive and easy to use interface.

M@ilMeter Forensic Technical Features Include:

Flexible Setup

- Runs on Windows NT, Windows 2000 or XP Professional
- Can be up and running in 10 minutes
- No software needs to run on the Exchange Server
- One M@ilMeter Forensic installation can monitor many servers
- The M@ilMeter Forensic installation installs all required components, no need for third party licences
- Allows for real-time forensics analysis
- Historic data can be automatically fed into the M@ilMeter Forensic database
- Support for servers in remote sites, providing single point data consolidation

Standard Database Support

- Microsoft Data Access Components (MDAC) technology
- Standard version supports MS SQL server – version 7.0 upwards
- Data clean down, and maintenance functions are supplied within the application
- SQL 2000 (for full text searching)

Robust Message Delivery

- No interruption to message flow
- Message delivery remains completely independent of M@ilMeter
- If M@ilMeter Forensic is stopped message delivery continues M@ilMeter Forensic will 'catch up' automatically when restarted

Built in Web Server

- M@ilMeter Forensic has its own built in web server
 - Small & lightweight
 - Dedicated function – it can only process M@ilMeter Forensic requests
 - Eliminates security and maintenance concerns sometimes associated with hosting a 'heavier' web server
- Can be started up on any available TCP/IP port, for added flexibility / security
- Access to the M@ilMeter Forensic reports is restricted via a username and password

Multi threaded capabilities

- Separate threads for key tasks allows M@ilMeter Forensic to deal with large volumes of email without trading off performance in other areas
- Full support for concurrent users

Forensics

- Ability to analyze Microsoft® Outlook PST files
- Supports full text searches on emails
- Mail attachments are stored and are retrievable
