

## **SECURITY FORENSICS, INC. SIGNS TIER 1, STRATEGIC PARTNERSHIP WITH WATERFORD TECHNOLOGIES**

**12-4-03:** Email management software vendor, Waterford Technologies, continues the expansion of its Accredited Reseller channel programme with the signing of its newest reseller partner, Security Forensics, Inc.

*Security Forensics, Inc. is a Chicago based organization that provides Consulting Services, Forensic Analysis, Training and Product to organizations mandated by Federal Regulations to invoke security solutions to Audit, Track and Monitor all electronic communications, externally and internally. Through Security Forensics, Inc. Empowerment Infrastructure™ and Risk Enabling Methodology™, organizations can now set forth written security policy according to the companies AUP and on-going Forensic Analysis so they will be self-sufficient and prepared for the 21<sup>st</sup> Century.*

Under the terms of the agreement, Security Forensics, Inc. will be responsible for the sale, implementation and first line support of Waterford Technologies' MailMeter software, a new email management product that has been developed to put control of corporate email usage back in the hands of employers.

MailMeter and MailMeter Forensic is a non-invasive, email management system that allows companies to track all internal and external email usage, in order to address issues such as email abuse, employee productivity, corporate privacy, legal liability, bandwidth consumption or non-compliance with the company's 'Acceptable Usage Policy' for email.

Dennis Portney, President and CEO of Security Forensics, Inc. says, "systematic electronic discovery, assessments, on-going forensic analysis and monitoring should be routine and standard practices for any organization held to federal-regulated compliancy such as 48 hour disclosure. However, any company concerned about their investment in their day-to-day operational infrastructure and held to the highest standards by their shareholders or investors should follow this lead"

He continues, "In today's contentious business environment, organizations must be vigilant when establishing, enforcing and monitoring all usage on their network, especially since 93% of all communication for any given company takes place in electronic format. By using MailMeter Forensic, control of your messaging architecture is placed back into the hands of the employers where they can mitigate litigious persecution, measure performance, expose offenders and create awareness amongst staff that electronic abuse is an unacceptable trend and practice."

New research by Waterford Technologies has concluded that at least 35% of email in any organization is non-work related. Four of the top ten domain names that employees are communicating with are typically free Internet Service Providers rather than business addresses, and three out of the top five attachments being sent and received within companies are non-business related.

MailMeter Forensic is compatible with either Microsoft Exchange or Lotus Domino.

**About Waterford Technologies**

Waterford Technologies ([www.waterfordtechnologies.co.uk](http://www.waterfordtechnologies.co.uk)) provides communications solutions that enable businesses to stop corporate email abuse by intelligently managing, amending and enforcing the way in which employees are using their Email systems. Waterford Technologies maximises the business benefit and productivity enhancements their customers derive from information and communications technology (ICT), by delivering innovative applications, products and services.

Since its inception in 2000, Waterford Technologies has developed extensive experience providing technology solutions that enable company directors to make informed business decisions and deliver tangible benefits across all major vertical markets. Waterford Technologies is supported by Enterprise Ireland, and is headquartered in Waterford, Ireland. It has customers in all major vertical markets, and specifically the Multi-National, SME, Government and Educational sectors.
